TransVac to Show Hospitals Lean, Clean and Green Solutions for Automated Waste and Linen Handling at the ASHE Annual Conference & Technical Exhibition

Innovative Waste and Soiled Linen Solution Saves Hospitals Millions, Reduces Exposure to Unhealthy Materials and Improves Staff Efficiency

Denver, CO (July 10, 2013) – TransVac, the trusted leader in automated trash, recycling and soiled linen collection and transport solutions, will be showing how hospitals can get lean, clean and save millions at the 50th American Society for Healthcare Engineering (ASHE) Annual Conference & Technical Exhibition in Atlanta, GA., July 22-23.

TransVac will be exhibiting at booth #1025 in the Georgia World Congress Center.

Unlike traditional methods of moving dirty materials through hospitals by means of carts, elevators and gravity chutes, the TransVac solution transports trash, recycling and soiled linen at high speed from every floor through a sealed, dedicated path in the hospital to a central collection point.

As a result, hospital patient and staff exposure to potentially infectious soiled linen and trash is minimized while reinforcing the appearance of a clean, healing environment. Additionally, hospitals save millions of dollars over the life of the facility through improved logistics, labor savings and designs that free up real estate and optimize building function.

“Hospital building projects invest millions to create a visionary environment,” says TransVac President Harry Pliskin. “But does that vision include 100 year-old technology that is unsanitary, odorous, and labor-intensive? We offer a proven alternative that keeps hospitals aesthetically appealing, clean and

sanitary, and efficient for years in the future. We invite all ASHE participants to visit us if they are planning a new hospital project.”

About TransVac Solutions

TransVac is a Denver-based professional design and engineering company with more than 40 years of success providing turnkey solutions for hospitals, utilizing industry-leading capabilities in LEED and EBD design and space utilization.

TransVac sets the standard for waste, recycling and soiled linen collection and transport solutions for hospitals. The company provides proven, best practices for making hospitals cleaner, more sanitary healing environments for patients while saving money on the collection and transport of dirty materials. TransVac has installed systems in many of the world's leading healthcare facilities, and continues to expand its advanced technologies into other applicable markets including hotels, airports, mixed-use developments and large entertainment venues.
