TransVac Premiers Advanced Hospital Waste, Recycling and Soiled Linen Solution at Arab Health

Innovative Waste and Soiled Linen Solution Saves Hospitals Millions, Reduces Exposure to Unhealthy Materials and Improves Staff Efficiency

Denver, CO (January 13, 2014) – TransVac Solutions, the trusted leader in automated trash, recycling and soiled linen collection and transport solutions for hospitals, will be the sponsor of the Exhibitor Meeting Point at the US Pavilion at Arab Health in Dubai, United Arab Emirates, Jan. 27-30, 2014.

TransVac will demonstrate for the first time at Arab Health the advantages of automating the collection and transport of waste, recycling and soiled linen in hospitals. TransVac's solution has been installed in many of the leading hospitals worldwide.

Unlike traditional, manual methods of moving dirty materials through hospitals by means of carts, elevators and gravity chutes, the TransVac solution transports trash, recycling and soiled linen at high speed from every floor through a sealed, dedicated path in the hospital to a central collection point.

As a result, hospital patient and staff exposure to potentially infectious soiled linen and trash is minimized while reinforcing the appearance of a clean, healthy, healing environment. Additionally, hospitals save millions of dollars over the life of the facility through improved logistics, labor savings and designs that free up real estate and optimize building function.

TransVac leadership and senior management will be available to answer questions, make presentations and accept requests for budgetary and technical proposals for new hospital projects. TransVac will actively seek local qualified partners in the Gulf Cooperation Council (GCC) and other global markets.
